	Why Are We Doing This Project? (Meaning & Purpose)	• The Hiring Project Form (HPF) is a real-world work simulation designed to mirror a "Worst/Hardest Day" scenario for a Junior Quality Assurance (QA) Analyst at HabotConnect . Rather than evaluating candidates on subjective resume claims or theoretical knowledge , this project tests whether a candidate can examine a flawed Business Requirement Document (BRD), deconstruct complex features into binary logic gates (True/False criteria), design manual test cases, and log structured defect reports without requiring constant human oversight. HabotConnect operates in a high-ownership, accountability-driven, 100% remote working environment where quality, precision, and structural discipline come before speed . We need candidates who treat law and requirements as simple math and enforce zero ambiguity . It gives candidates a realistic preview of the daily analytical work expected of them, allowing both parties to determine mutual fit before making an offer.
	What Will Be the Outcome of the Project?	The candidate will produce a structured, professional evaluation package consisting of: 1. Requirement Deconstruction Analysis: A breakdown highlighting 3 logical flaws or missing edge cases in a simulated Business Requirement Document (BRD) . 2. Manual Test Case Suite: A table of 5 structured manual test cases using Boundary Value Analysis (BVA) and Equivalence Partitioning (EP). 3. Binary Defect Reports: 2 fully documented bug reports containing precise Steps To Reproduce (STR), expected vs. actual behavior, and assigned severity ratings. 4. Slide Presentation: A slide deck (maximum 15 slides) summarizing their analysis, methodology, and binary logic gates for presentation to the panel.
	Must know	Hiring at HabotConnect is a demanding process. Typically 1 out of 180+ candidates are accepted. You must show that you know your work. If you wish to be a HaboTech, you must know its Values and Leadership Principles.
	Project Context	A new feature is being launched on the HabotConnect platform to match parents with Learning Support Assistants (LSA) in the United Arab Emirates (UAE) . The technology team has prepared an initial Business Requirement Document (BRD) for the Parent-LSA Booking Engine . Before development proceeds, a Junior Quality Assurance (QA) Analyst must deconstruct the document, eliminate logical ambiguities, and establish strict Software Testing Life Cycle (STLC) quality gates .
	You Will Be Assessed On	1. **Requirement Analysis:** Ability to identify missing logic, edge cases, and contradictions in a Business Requirement Document (BRD) . 2. **Test Case Design:** Depth and structure of manual test cases using Boundary Value Analysis (BVA) and Equivalence Partitioning (EP). 3. **Defect Documentation:** Clarity in logging bug reports with exact Steps To Reproduce (STR), severity, and expected results.

		4. **HabotConnect Binary Logic:** Execution of True/False binary logic rules with zero required human judgment or guesswork . 5. **Structural Discipline:** Adherence to submission formatting, clarity of written communication, and use of full forms
	You are Expected To Do	**Task 1: Requirement Deconstruction** Read the provided sample Business Requirement Document (BRD) for the Parent-LSA Booking Engine. Identify and list 3 logical gaps or contradictory rules . **Refer Document =** **Sample Data - Junior Quality Assurance (QA) Analyst - 060826** **Task 2: Manual Test Case Writing** Draft 5 structured manual test cases in a spreadsheet. Include: Test Case Identifier, Test Description, Pre-conditions, Test Steps, Expected Result, Actual Result, and Pass/Fail Status . Ensure at least 2 test cases cover boundary/edge-case scenarios. **Task 3: Binary Defect Logging** Simulate 2 software defects found during testing. Create a formal defect report containing: Defect Identifier, Summary Title, Steps To Reproduce (STR), Expected Behavior, Actual Behavior, System Severity, and Priority Rating. **Task 4: Summary Presentation** Create a Google Slides or Microsoft PowerPoint slide deck summarizing your testing strategy, requirement findings, and binary pass/fail gates.
	The Presentation / Submission Is To Be	**Instructions to Complete:** **You are required to:** 1. **Single File Upload Requirement:** The submission Google Form contains **only one single file upload field**. Therefore, you must combine all your completed project deliverables into **one unified document file** (such as a single Portable Document Format [PDF] file or a single Microsoft PowerPoint [PPTX] slide deck/ Google slides) before uploading. 2. **Your single uploaded file must include:** **Header Identification:** Your Full Name, Email Address, clearly displayed at the top of the very first page or slide. **Task 1 Analysis:** The Business Requirement Document (BRD) deconstruction

		highlighting 3 logical gaps. **Task 2 Test Suite:** The 5 structured manual test cases formatted in a clear table layout. **Task 3 Defect Logs:** The 2 simulated bug reports containing detailed Steps To Reproduce (STR). **Task 4 Presentation:** The executive summary slides (Maximum of 15 slides total) . **Formatting Rules:** **Wrap Text Enabled:** All cells in embedded tables or spreadsheets must have **"Wrap Text" enabled** so that all text is fully visible without being cut off . **Use Full Forms Only:** You must write out **Full Forms Only** across all pages, tables, and slides (Do not use unexplained short forms or abbreviations) . **External Links:** If you created your test cases in an external cloud spreadsheet (such as Google Sheets), place the accessible Uniform Resource Locator (URL) link prominently inside your single uploaded document. Ensure your answer document and code files are clearly labeled with your full name and contact information at the top **Submission Link (GoogleForm):** https://forms.gle/bg65c9VwfPCuryEk9 **Submission Deadline:** 12 August 2026
	Suggestions & Guidelines	• **Timeframe:** The project should take you 4 to 6 hours maximum to complete. • **Resources:** You are expected to use outside resources to help you understand what is required (e.g., basic platform logic principles). • **Independence:** Show us that you can do what is required by us without supervision. No company resource person will be available to assist you. • **Self-Screening:** Use this opportunity to find out whether you truly want to work within HabotConnect's highly accountable, detail-obsessed, "Quiet Management" remote culture.
	When	You will present your completed project during the Project Interview phase.
	Where	Video call presentation via Google Meet. You will receive a calendar invite with the date and time from our Human Resources team members.
	Who	You will be presenting to panel members which may include the CEO, Team Lead, and Human Resources team members.
	How	• It is assumed that you will let us know if you are unable to do the required presentation and that you no longer wish to continue with the interview process at HabotConnect. Your slide presentation should include links to your English Code documents or sheets if required. • Slide presentation with links to other documents or sheets if required. Max of 15 slides
